PLASTIC Status Report to the STEREO SWG

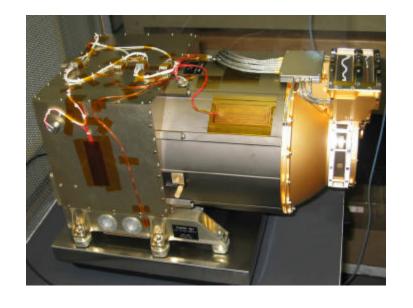

18 Dec 2004 SSL UCB

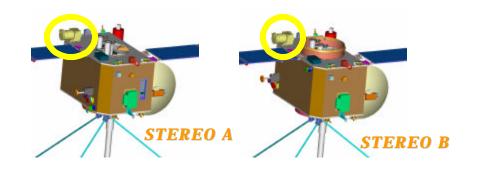

UNH: A.B. Galvin (PI), E. Moebius (Lead CoI), L. Kistler, M. Popecki, J. Quinn, M. Lee, C. Farrugia, S. Turco IM

UBern: L. Blush (Lead CoI), P. Bochsler, P. Wurz U Kiel: R. F. Wimmer-Schweingruber (Lead CoI)

MPE: B. Klecker (Lead CoI)

NASA/GSFC: B. Thompson (Lead CoI)

PLASTIC FM1

PLASTIC SUBSYSTEMS

Entrance System (UBern)

Time of Flight (UNH, Chamber

(UNH, UBern, MPE)

Electronics Box (UNH, MPE, UKiel, UCB) (Power supplies,

Analog electronics)

Digital electronics,

Power Supplies include:

LVC (provided by UCB/IMPACT)
TOF HV (-25kV PAC, MCP, SSD)

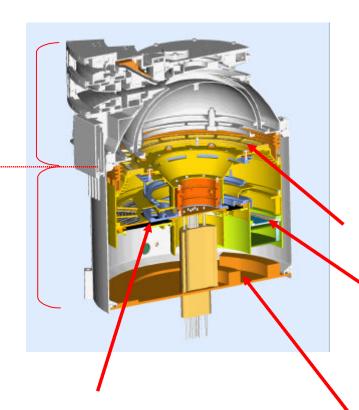

Sweeps for Entrance System (ESA, DEFL1, DEFL2, Schannel)

Internal View of PLASTIC

Entrance System

Time of Flight Section

Microchannel plate (MCP) detectors

Entrance System includes

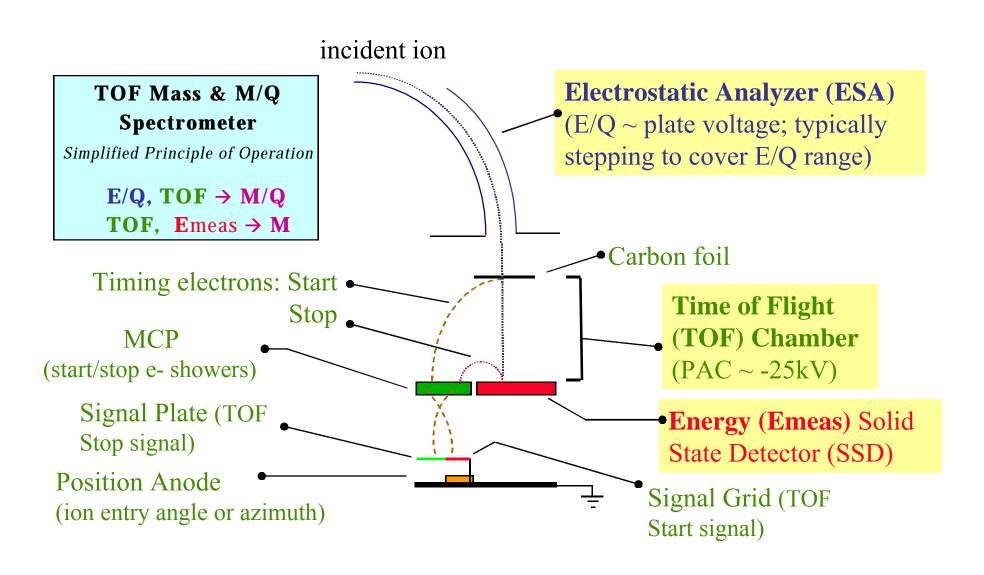

- Solar Wind Sector
 "Main" and "Proton" (aka
 "Schn") Channels
 Polar Angle Deflectors
- Suprathermal Sector
- Electrostatic Analyzer ESA

Carbon Foils (CF)

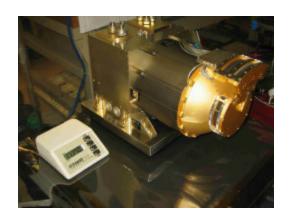

Solid State Detectors
(SSD)

Signal Board (Anodes)
Including Discrete and Resistive
Position Anodes

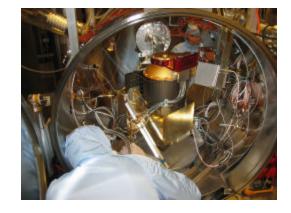

BASIC PRINCIPLE OF OPERATION FOR SPECIES DETERMINATION

PLASTIC FM1 Status Overview

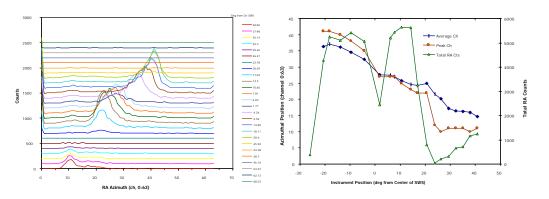

Birth of FM1

Ion Gun Chamber at UNH

- Instrument initial integration completed
- Initial ion gun tests at UNH Established basic performance for Main Channel and Suprathermal Sections (including TOF, SSD, Discrete and RA Position)

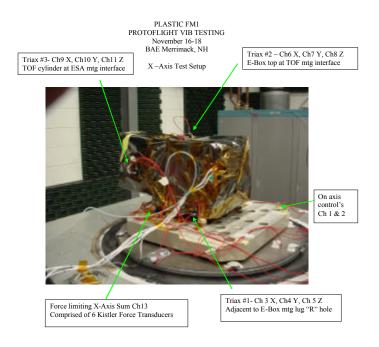

Azimuthal Positioning in Solar Wind Sector by resistive anode

and discovered some problems:

ESA power supply failure (optocoupler) Small problems on FPGA coding

IPER held at UNH

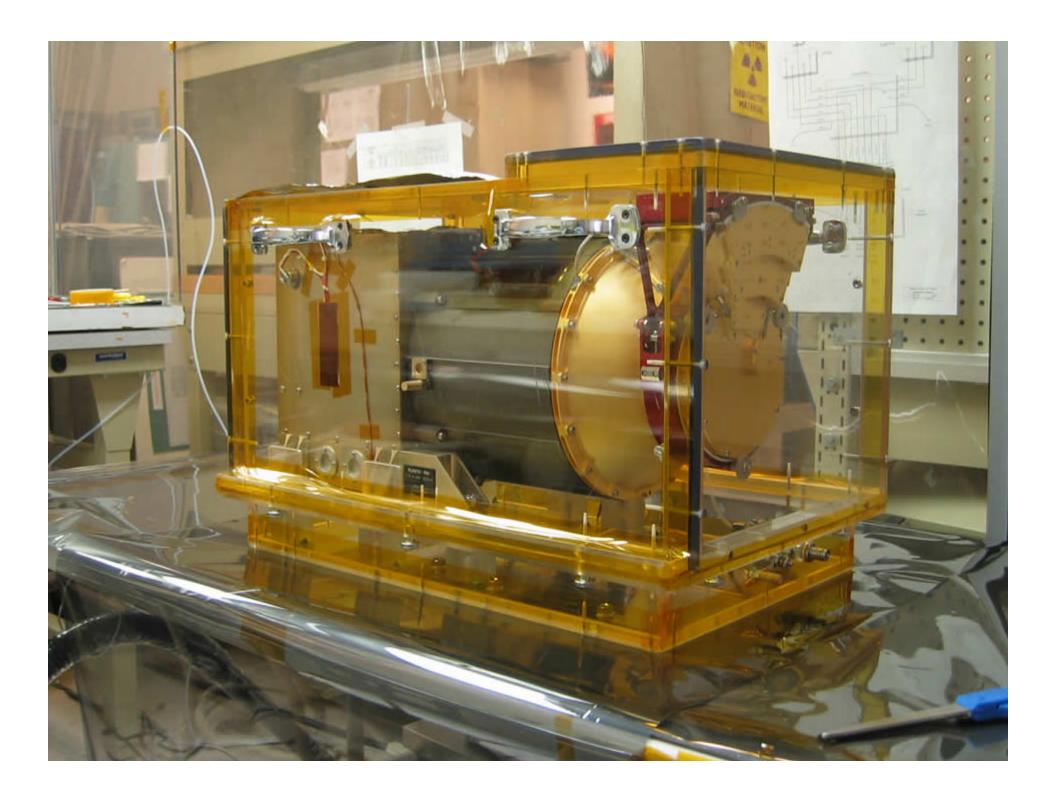

PLASTIC FM1 Status Overview

■ Carbon foils (3.5 microgram/cm²) survival were primary concern. Full success story

- FM1 Vibration tests at BAE completed
- Instrument post-vib test and inspection completed

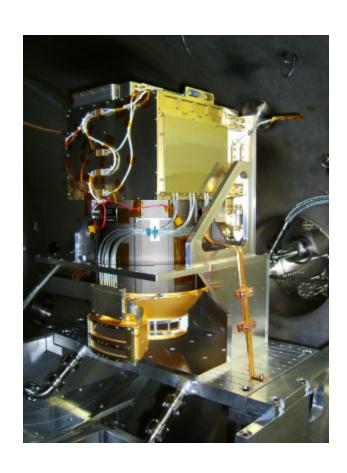

PLASTIC FM1 Calibration

At the University of Bern CASYMS Facility

CASYMS Facility at University of Bern

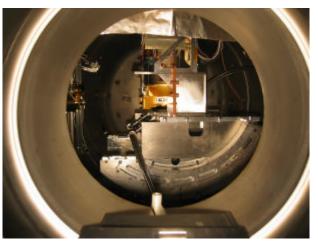

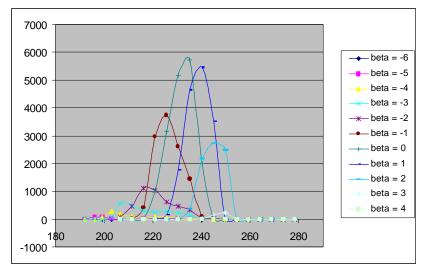

- Energy range: ~10eV/e 60keV/e
- Beam size: 10 x 10 cm²
- Ions from gas sources (H, He, Ne, Ar, ...)
- Charge states: 1+, 2+, ...
- Motion: α - β -z table, additional θ table available
- Modest cooling table available (~0°C, ~10 W)
- Clean room, Class 100

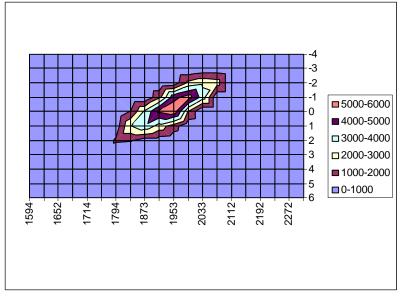

FM1 Tests Ongoing at Bern (Solar Wind Sector)

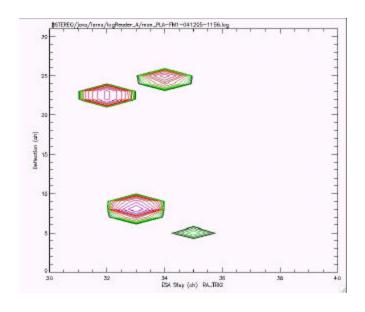

- Deflection test tipping instrument to known elevation angles and sweeping the deflectors on the Main and S channels with at selected energies
- ESA E/Q and Angle response ("fish") scans at selected energies and species
- MCP efficiency for selected MCP bias, species, energies, PAC
- Energy (SSD) data for selected E/Q and species
- Test of ESA and DEFL sweeping in Main Channel
- Test of ESA and DEFL sweeping in Proton Channel
- Extended operation at -20 kV PAC, plan gradual increase
- Test of Main/Proton Chn switching (w/o IDPU) during sweeping
- Limited azimuthal scans
- Test of tables (SWEEP, RA, Classification)

Preliminary (onsite) processing FM1 calibration at UBern

(courtesy Reto Karrer and Mark Popecki)

FM1 Status Summary

Done

Integration

UNH ion gun tests for functionality/performance

IPER

Vibration

Ongoing

Solar Wind Sector Calibration at UBern

Proton Channel performance tests

TOF resolution, MCP efficiencies

(possible threshold change)

Table adjustment and retest

Other sectors if time permits

IDPU s/w 2.6 testing at UNH/UCB

Still to do

IDPU s/w 3.0 development and validation

TV/TB, EMC

Mass and Magnetic Properties

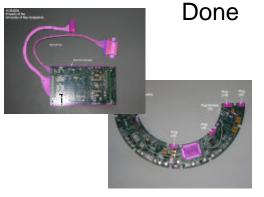

Replacement of SSD part

Refurbishment of LVC

Retest

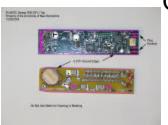

Deliver

FM2 Status Summary

Entrance System Assembly TOF Chamber Assembly TOF PS Coated and Re-assembly Digital Boards and SSD Electronics Boards Coated SSD ACTEL and ASIC selected and installed SSDs and MCPs selected an installed in frames Fit checks

Ongoing

TOF PS vacuum testing (was at -24 kV this week) Digital Electronics reassembly and retest SWEEPs PS boards reassembly after coating, finish burn in

Still to do

Instrument level Integration and initial tests (January)

Everything Else (January-March)

Outstanding Issues

General Cost Increases and Schedule Erosion

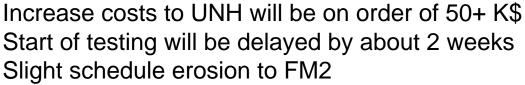

NASA requested change of venue for TV/TB tests

Testing planned at UBern facility to save (US) costs and FM1 schedule.

Bern facility meets all PLASTIC requirements.

Project wants testing done at GSFC:

Proposal for cost increase needs to be written, submitted (January earliest), would need approval prior to test commencement

IDPU PLASTIC S/W Development and Validation Running late

FM1 calibration at CASYMS may be limited to solar wind sector due to schedule constraints

Recent EPO Activities

Christa McAuliffe Planetarium has premiered the new show "Breathing Space", which included funding from STP. Show highlights climate and space weather changes on Earth, by showing how other planets with and without magnetospheres, atmospheres, are affected by solar events and solar changes. Geared for youth: Two teenagers skate boarding through the solar system to get material for a homework assignment.

CMP "Stellar Fridays" for teens at the Planetarium. Also "Spacetacular Saturday" in May - over 600 attended this past year.

Project SMART, summer science institute at UNH for teens. Poster presented by student at this AGU.
